➤ **Please find below the response to the queries raised.**

Contractor Comment	Response/Reference Document
1. For the semi luxury Vessel - The total seating capacity for the luxury version is 24 persons, including crew consisting of 16 VIP seats and 2 crew seats, which means there will be 6 standard seats. Please confirm if this arrangement is acceptable.	The arrangement is acceptable
2. Engine 300 x 3 engines is too big for our boats. Therefore, we would propose with 3x250HP electrical engines which will give the speed of 36 knots or more (as the required speed for the vessel). Please confirm if this is acceptable	As specified in the technical specifications, the engine requirement is 3x300 HP
3. Please confirm that the luxury boat should be fully enclosed rather than semi-enclosed.	The semi luxury boat should have an enclosed area for 16 VIP seats and 6 standard seats. The aft area near transome should be kept as open space
4. It is mentioned that only the wiper and trim tab switch are required; but is not mentioned on the basic features or electrical system. please confirm that these two items are not to be added to the optional equipment list. Also, our boats are not provided with wiper as our windshield's glass does not require a wiper.	if the vessels windshield Is Glass, no need to provide wiper. However, if it is made of plastic, wiper is required. Trim tab is required for the vessel and is added to the operational equipment list.
5. Please note that the engine warranty is six months, as specified by the engine supplier (not one year).	Minimum Engine Warranty provided shall be one year
6. It is mentioned that the deck wash outlet shower fixed on port is with 50ft pipe. Instead, we will propose with 2 x Shower one at the front and one at the back with each 5Mtr hose. Please confirm if this is acceptable.	Proposal is acceptable
7. The standard Vessel has canvas and zips. Why a silent generator is mentioned for air-condition when this is not a complete enclosed vessel. Do you need this vessel to be airconditioned? Our non-AC vessels are half enclosed and half with curtains.	Silent Generator is not required for the standard vessel. Refer to Addendum 1
