Question	Answers
Island water can be used for concreting?	Unless approved by tests, water from the following sources should not be used; 1. Water containing inorganic salts such as manganese, tin, zinc, copper, or lead. 2. Industrial waste water from tanneries, paint, and factories, plants, chemical and galvanized plants. 3. Water carrying sanitary sewage or organic silt. 4. Waters containing small amounts of sugar, oil, or algae. Well water can be used such as: Biological (Bacteria and algae free), Physical (Temperature, turbidity and clarity, salinity and suspended solids), Chemical (pH, dissolved oxygen) and Aesthetic (No odors, no color)
