Construction of National Agriculture Laboratory facility at Fuvahmulaku City

MOFAMRA is currently working towards the establishment of a multipurpose laboratory in Fuvahmulaku City. Four laboratories; soil science, plant pathology, entomology and tissue culture will be housed in this newly established laboratory facility. The purpose of this laboratory is to provide accurate and timely advise to farmers for them to make evidence-based decisions. As indicated in the site location plan, the new building is planned to be constructed in the block next to the existing AgroNat Building. Total land area of this 2-floor building, including the single floor greenhouses is 6229.075 Square feet.

Proposed Location for the Laboratory

Water and electricity connection are not available to site as of now. Temporary water and electricity need to be arranged for the lot. Fuvahmulaku City Council will allocate 1000sqft land next to building site for the contractor to build temporary storage structure to store required materials for the project. The contractor needs to clear land by cutting down few trees and shrubs as it is seen in the site location photo. There is no existing building structure in this land.

The main scope for this project comprises of all structural and architectural works, electrical, plumbing, sanitary, mechanical and ventilation works as laid out in the drawings, BOQ and specifications provided. The scope also includes the establishment of greenhouse, a boundary wall, paving of the walkway and external lighting around the building.
